

SUPPLEMENTARY DATA

FIG. S2. Expected accumulation of haplotypes depending on sample size (n) for: (A) *P. caribaea* var. *bahamensis*; (B) *P. caribaea* var. *caribaea*; and (C) *P. caribaea* var. *hondurensis*. The curves have been adjusted from the expected haplotype richness H_r obtained by rarefaction analysis. For comparison, the number of haplotypes found in our samples is shown for each species at the corresponding value of n (+).
